

RAJA KRISNA MARPAUNG

Junior Cloud Engineer | Cloud Engineer Intern | DevOps Intern
Depok, Jawa Barat, Indonesia | 081244772920 | prokrisna8@gmail.com

PROFESSIONAL SUMMARY

Informatics student at Universitas Gunadarma with hands-on experience in Linux administration, Docker containerization, CI/CD automation, monitoring, and cloud infrastructure on AWS EC2. Built and maintained self-hosted environments and an IoT telemetry monitoring platform using Prometheus and Grafana. Strong foundation in networking fundamentals. Seeking a Cloud Engineer or DevOps internship to apply practical infrastructure skills and continue growing in a professional engineering team.

EDUCATION

Universitas Gunadarma 2024 – 2028
Bachelor of Informatics (S1 Informatika) | GPA: [X.XX / 4.00]
Relevant Coursework: Computer Networks, Operating Systems, Database Systems, Computer Architecture, Software Engineering

TECHNICAL SKILLS

Cloud & Infrastructure: AWS EC2, Linux (Ubuntu), Tailscale
Containerization: Docker, Docker Compose
CI/CD & Version Control: GitHub Actions, Git, GitHub
Monitoring: Prometheus, Grafana
Web, Database & Messaging: Nginx (reverse proxy), PostgreSQL, Redis, MQTT
Networking: TCP/IP, Subnetting, VLAN, Routing, DNS, DHCP, Basic Network Troubleshooting

PROJECT EXPERIENCE

IoT Telemetry Monitoring Platform Personal Project
Docker, MQTT, Prometheus, Grafana, Linux, AWS EC2

- Built an IoT simulation platform to publish, receive, and process telemetry data through an MQTT messaging infrastructure.
- Containerized platform components with Docker for consistent, repeatable deployments on a Linux-based AWS EC2 instance.
- Configured Prometheus and Grafana dashboards to monitor telemetry data and system metrics in real time.
- Gained practical experience in cloud deployment, service connectivity, and troubleshooting distributed components.

DevOps Homelab Infrastructure Personal Project
Ubuntu, Docker, GitHub Actions, Prometheus, Grafana, Tailscale, Nginx

- Set up and managed an Ubuntu-based homelab to practice Linux administration, containerization, and self-hosted service operations.
- Automated build and deployment workflows using GitHub Actions to practice CI/CD pipelines.
- Deployed containerized services with Docker and exposed them through Nginx as a reverse proxy.
- Implemented Prometheus and Grafana to monitor host and service health.
- Configured secure remote access between devices using Tailscale and applied networking fundamentals to troubleshoot connectivity.

CERTIFICATIONS / TRAINING

Networker ID – Sertifikat Jaringan Dasar (Mei 2025 – May 2028)
